

# DVD & CD DIGITAL VIDEO RECOVERY & ANALYSIS SERVICES

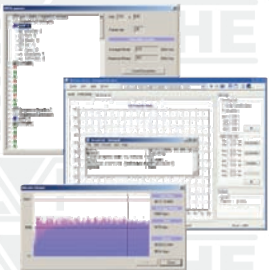

We are able to offer a specialist **optical media** digital video recovery & analysis service which is fast, reliable and confidential from our lab in Essex.

Data from unfinalised and difficult to read DVD's or CD's can be recovered then used to reconstruct playable discs from the first to the last byte of video or audio even if it is not possible to finalise the original disc.

Additionally, we can clean up multimedia content to make it intelligible using our advanced digital enhancement system.

Should you require your video and audio data in a different digital or analogue format, we can transfer to a number of different standards.

Media, file and waveform analysis is all part of the basic package. This helps us to determine if any further, more powerful processing needs to be applied in order to achieve playability. However, if you need a detailed examination report we can provide this as an extra service.

Home Office Digital Imaging Procedure guidelines are observed at all stages of our work.

AV Niche have many years of experience with optical media, we pioneered the use of CD and DVD for evidential use, and have a very high success rate for data recovery.
